## Skills

React  
TailWind  
JavaScript  
HTML  
CSS  
Git

## Profile

Able to effectively self-manage during independent projects, as well as collaborate in a team setting. Experienced with the latest cutting-edge development tools and procedures.

## Projects

### Eternal Elves Info

Created a website with useful information using a combination of different APIs, styled with CSS and the main functionality was done in React. It's possible to search for players and their items. Additional information can also be displayed for each item. Other features include being redirected to the official item and displaying every item in an ordered manner.

### The Witcher Basics

The website was created following a UI design. Its purpose is to help with the basics of the game "The Witcher 3". The data is saved locally (no APIs used). Different enemies and info about them can be accessed. Also, information about the schools of the game as well as the map can be seen on the same page. React and Tailwind were used during the development.

### Weather app

Two APIs are used in order to get access to different cities and the weather of the selected city. Images of the weather are shown, the temperature, the wind speed, the humidity and the pressure. Another feature is the 5-day forecast of the current city.
